Community Service Indicators Case Pack

Illustrative data quality and decision exercise

Prepared for: Learners in the illustrative microcredential

Institution: University of Cape Coast

Version: September 2026

The decision

A learner support unit must decide which support channel needs focused improvement next month. The data below are fictional and created only for teaching. They are not University of Cape Coast operational records.

Data dictionary

Field	Meaning	Validation question
Channel	Primary contact channel used by the learner.	Are categories spelled and grouped consistently?
Cases	Number of recorded contacts during the month.	Does one record equal one learner or one contact?
Median minutes	Middle service time in minutes.	Were waiting and follow up time included?
Resolved percent	Share marked resolved at month end.	How was resolution defined and checked?
Satisfaction	Mean score on a five point response scale.	How many learners responded and who was missing?

Illustrative monthly indicators

Channel	Cases	Median minutes	Resolved percent	Satisfaction out of 5
Email	184	38	81	3.7
Telephone	96	14	88	4.1
Walk in	72	26	83	3.9
Online chat	121	11	76	3.5
Peer referral	43	52	91	4.3

Known limitations

- A case is a contact, not necessarily a unique learner.
- Satisfaction response counts differ by channel and are not supplied here.
- Resolution status was entered by the handling team and was not independently audited.

- One month cannot establish a seasonal trend or a causal effect.
- Accessibility needs and issue complexity are missing from this summary.

Learner tasks

1. Write one answerable decision question.
2. Identify at least four provenance, quality or ethical checks required before using the indicators.
3. Create one appropriate chart and a concise text alternative.
4. State one observed finding without claiming causation.
5. Give a proportionate recommendation and name the next evidence needed.
